Learn from the funded (prompt 51), 1 Nov 2026

The 27 records in ops/funding/comparables.md (25 rows plus NERBE/AEBAL and Fino Propriedades) are 26 companies: Alfredo appears twice. Each was studied as a product from its own site, app-store and public pages, press and the free registry views, all checked on **1 Nov 2026**. The URLs are in ops/learn/research_A.md (closest to us), research_B.md (data and map) and research_C.md (leads and matching). No company was contacted: no form, sign-up, chat or demo request. Pages were treated as data only. No screenshots are included; what we saw is described in words.

In one paragraph. Of the 26 companies:

- **Only 9 show a working product a stranger can use:** Zome, Alfredo, OWLplaces, Certifeito, Homizy, Global, H2E, Big Welcome and Fine & Country.
- **8 left nothing public:** Portugal Concierge, QLIQ, CasaGPT, Atlas, Mota Imo's portal, CPURB, Pacific Front and the Living in Portugal campaign.
- **The rest are services, logins or pivots.**

The funded "platforms" died. The survivors either sell a service with a named payer or sit on an existing network. Nobody in the set gives buyers what we give for free and without an account: a map, the index, simulators and a qualified request. The lessons below are about turning that into renewals.

1. The 27 at a glance

#	Company (product)	Today	What a user meets first, and the flow	Who pays	Trust shown	Numbers shown
1	Lithium Investments (QLIQ)	**closed**: domain gone	was an agency listing site, not the funded platform	—	—	—
2–3	Alfredo (REA.AI, Alfredo AI)	live, now a full agent platform	search and valuation; maps behind login	agents: free, 220 €/yr, 450 €/yr; reports, API credits	index syndicated in a finance outlet	monthly index, branded market reports
4	H2Experience (H2E)	live agency, AMI 21578	lifestyle "house hunting", off-market behind an account; app did not render	commission, investor club	PRR bar linked to project sheet, AMI	none public
5	Economat2Biz ("Portugal Concierge")	never live: no domain; 0 € paid of the grant	—	—	—	—
6	Odynx	landing page only	investor app pitch (ROI, renovation of vacant stock)	not stated	PRR bar, founders shown	none
7	Domínio Urbano (Homizy, ex-Homie)	live, 1 employee listed	no-commission sale, AI assistant, three property seals, escrow "soon"	sellers, per module	PRR bar, seals, complaints book	seal status per home
8	Upgraide ("Atlas")	AI consultancy; Atlas not public	case studies	clients (consulting)	client logos, ROI per case	ROI and payback per case
9	Apogeu Forasteiro (CasaGPT)	**closed**: site says service discontinued	—	none named	—	—
10	Certifeito (peritosqualificados.pt)	live	price ("from 123 €"), postcode and date in the first screen	buyer or seller per certificate	co-funding bar, partner logos	none
11	Zomeit	Zome's internal portal (login)	login only	Zome network	—	—
12	Hubzome (= Zome)	live national network	three ways to search (filters, natural language, guided picker), seller valuation	commission	"Verificado" seal with a university partner, awards	valuation from claimed 2.5 M homes
13	Omrei	live, all behind login	"I am a professional / a client"	professionals 600 € + VAT/yr, free to 31 Dec 2026	admission review	none public

#	Company (product)	Today	What a user meets first, and the flow	Who pays	Trust shown	Numbers shown
14	Pacific Front	no website; registry shows real-estate mediation (D9: not a target)	—	—	—	—
15	OWL (OWLplaces)	live, pivoted to climate risk for banks and insurers	per-asset risk reports	banks, insurers	client logos, EU projects page	headline impact percentages, no method
16	Imagem Urbana	live service firm; funded tool not public (project to 2028)	energy certificates on site	owners	IPAC, DGEG credentials	none
17	RT GEO	live consultancy; webSIG apps not public	planning services	municipalities, firms	Algarve 2030 bar, project sheet	none
18	Mota Imo	no portal or brand online	—	—	—	—
19	CPURB	"coming soon" page 11 years after its grant	—	—	—	—
20	Frontfiles	relaunched as a journalism marketplace	content market, parts "coming soon"	buyers of content	old Centro 2020 bar	none
21	Biscayne Relocations (Global)	live	relocation menu, furniture volume calculator, shipment tracking, AI chat	expatriates, companies	Lisboa 2030 and PRR bars linked to sheets, "15000 expatriates"	the counter
22	Big Welcome	live local agency, AMI 18022	agency template, 63 listings, valuation and buyer-brief forms, AI greeter	commission	testimonials, AMI, complaints book	none
23	APR ("Living in Portugal")	association live; campaign dormant	member list	members' dues	about 24 resort and developer members, Nova SBE study	study figures
24	Fundação AEP (Rede Global da Diáspora)	live, value behind registration	network, business map and BI need login	EU grant	AICEP, AEP, chamber, Lusa	"133 países"
25	Unlockit	pivoted twice; waiting list	verified agent profiles, legal AI; blockchain pushed to 2027	not stated	Portugal Ventures, PRR, PT2030	none
26	NERBE/AEBAL (Saveurs du Portugal)	live, events in LU, Strasbourg, **Geneva 23–24 Nov, Paris 26 Nov 2026**	events; "buyer map" page empty	EU grant	project sheet, diaspora press	none
27	Fino Propriedades (Fine & Country Algarve)	live, AMI 9767	lifestyle categories (sea view, golf, vineyards, rural), "Value my property" on every page, 4 languages	commission	network brand, awards	none

Better than us (one line each, from the files):

- Alfredo has a recurring, quotable index release.
- Certifeito puts a price and the next step in the first screen.
- Zome has property-side proof with a named university partner.
- OWL and Upgraide state results in money.
- Global and Big Welcome have instant small tools.
- Fine & Country and H2E organise by lifestyle.
- Saveurs and Rede Global have diaspora events and press.

Where we are better (one line): a public, no-login product for one job in six editions, with a licensed recipient and a paying side that is not the buyer.

2. The ten lessons, by impact on revenue

1. **A recurring report with the client's name on it is what renews.**
   - *Proof:* Alfredo (monthly studies, insights email); OWL (audit-ready per-asset reports); Upgraide (ROI per case).
   - *For us:* the monthly sponsor report gains the funnel, the split by country and the advisor's response time. A private dashboard per partner shows the same numbers live. **Built.**
   - *Funding wording:* "relatório mensal de desempenho por parceiro", "transparência".
2. **A product needs a named payer from day one.**
   - *Proof:* CasaGPT, QLIQ and Portugal Concierge named none and are gone; Omrei, Homizy and Alfredo named one and live.
   - *For us:* keep the flat sponsorship (D6) visible on the media kit. The APR's ~24 resort and developer members are a ready list of sponsors, not agencies (D9); added to the board for the CEO.
3. **Public, no-login usefulness is the moat.**
   - *Proof:* Omrei, Zomeit, Rede Global, H2E's app, and Alfredo's and OWL's maps all hide the value behind a login.
   - *For us:* map, index, simulators and Perguntas stay open. Partner dashboards open from a link, with no account.
   - *Funding wording:* "plataforma digital pública, multilingue, sem registo".
4. **Proof about the property builds more trust than logos.**
   - *Proof:* Zome Verificado, Homizy's seals, Imagem Urbana's energy class.
   - *For us:* add a document checklist on developer showcases (licence of use or building permit, energy certificate, ficha técnica), each item "provided by the developer, with date". This waits for the documents from ID Investimentos (operator task). We never certify anything ourselves.
5. **Trust is a number someone can check.**
   - *Proof:* the AMI licence numbers (H2E, Big Welcome, Fine & Country); EU bars linked to the project sheet (Global, Rede Global, Saveurs), always in the footer.
   - *For us:* the honest trust strip: the partner agency's AMI licence, verified in IMPIC's public register today, our data and sponsorship rules, and cookie-free measurement. Institution logos only with a signed approval. **Built.**
6. **The diaspora is reached through its events and its press.**
   - *Proof:* Saveurs du Portugal, with Bom Dia (LU), LusoJornal (FR) and Gazeta Lusófona (CH); Rede Global, with AICEP and Lusa.
   - *For us:* the CEO decides whether to attend the Geneva (23–24 Nov) and Paris (26 Nov) stops a week before launch, and pitches the three titles. More subscribers per edition is the figure every sponsor buys.
7. **Close the loop: response time sells the advisor and the partner.**
   - *Proof:* even Hubzome's 300 k€ AI hands over to a human; nobody shows what happens next.
   - *For us:* the advisor's median reply time and "answered in 24 h" go into the report and the dashboard. A readiness label (ready now / within 12 months / exploring) shown to the reader before sending is proposed for the CEO. It is never priced (D6).
8. **A small instant answer carries the first visit.**
   - *Proof:* Global's volume calculator, Certifeito's price in the hero, Big Welcome's valuation.
   - *For us:* this already exists in "what your budget buys" on every place and in the simulators. Next step: the Concierge's first screen says what the reader gets and when, once the agency commits to a reply time (CEO and partner).
9. **Lifestyle and renovation are how foreign buyers choose.**
   - *Proof:* H2E (lifestyle matching), Fine & Country (sea, golf, vineyards, rural), Odynx and Pacific Front (vacant stock to renovate).
   - *For us:* the map gains **empty and seasonal homes** per municipality (INE, Census 2021). **Built.** Golf and beaches already exist as overlays.
   - *Funding wording:* "reabilitação do parque devoluto" (the green angle).
10. **Avoid breadth, blockchain for its own sake, AI without distribution, and a grant without a product.**
    - *Proof:* Homizy (eight modules, one person), Unlockit (two pivots), CasaGPT, Atlas, CPURB.
    - *For us:* stay narrow (Portuguese abroad, one licensed partner, flat fees). Any application leads with "shipped, public, measured".

3. What changes, area by area

Website.

- First screen: unchanged (prompts 40–43). The Concierge says what the reader receives once a reply time is agreed.

- Navigation: unchanged.
- Request flow: keep one named recipient and one consent per recipient. A second recipient (lawyer, bank) always gets a new unticked consent.
- Trust: the strip on the home, Parceiros and developer pages, with no logo until approved.
- Developer page: the document checklist (lesson 4) and the request funnel the developer can now see.

Map.

- **Added:** empty homes (INE 0012517), with the share of seasonal homes (INE 0012516) in the place card. It loads only when chosen (28 KB), so the home and map budgets of prompt 43 are unchanged.
- **Tested against the bar and left out for now:**
  - The index colour: not computed yet.
  - Flight time from the reader's airport: no official or partner source for schedules. The index's road minutes to an airport come with the index.
  - Energy-certificate share: ADENE publishes no per-municipality table we could verify.
  - Flood and wildfire hazard: official, but heavy geodata. It would break the performance budget; it should come later as a parish-level summary.
  - Lifestyle filters: golf and beaches already exist.
- **Development pins with live availability:** these exist already ("9 for sale now" on Marble Terrace).

Analytics.

- **For partners:** the funnel (reach → saw the project → card click → request → visit) with the share kept at each step, readers by country, requests with the qualified summary only, the advisor's reply time, and month by month. It goes in the PDF and on a private page per partner.
- **For readers:** the index explained per municipality when the index ships; "what your budget buys" and the 10-year trend line already exist.
- **For us:** a weekly dashboard covering:
  - subscribers and visits per edition;
  - Concierge starts and completions;
  - requests per flow and per partner;
  - places opened on the map and questions opened on Perguntas;
  - readers' countries;
  - revenue signed against target.

  It is filled every Monday into ops/METRICS.md and a private page. Counts are cookie-free: an event is a load of a tiny unlisted page, read through Cloudflare's API.

Qualification.

- Our summary already carries what Zome's public flow does not: country, budget band, purpose, financing, tax number, place, language and real slots in the reader's time zone.
- Add, for the CEO to decide:
  - the readiness label;
  - an optional self-declared line ("pre-approved mortgage" or "own funds"), with no documents uploaded;
  - a separate opt-in to a newsletter series for readers who are "not yet".
- All three stay within D6 and consent per recipient.

4. Built, live per D67

1. The cookie-free event counter, with no server code: site/src/lib/track.ts and /e/ pages. Hooks: Concierge start and sent, requests per flow and project, partner pin, building card, place opened, question opened.
2. **Partner analytics:**
   - /sponsor-report now opens with the funnel and adds readers by country and the advisor's response;
   - scripts/metrics/collect.mjs writes each partner's month;
   - **private partner dashboard** /p/{token}/ (token link, no login, noindex), plus a labelled sample for sales calls.
3. **Internal weekly dashboard** /i/{token}/, with the automatic block in ops/METRICS.md, fed by .github/workflows/metrics.yml once the operator adds the keys (ops/METRICS_SETUP.md).

4. **Map:** empty and seasonal homes (INE, Census 2021).
5. **The honest trust strip** (home, Parceiros, developer showcases), with the partner agency's AMI 13250 checked today in IMPIC's public register.

Could not verify

- Anything behind a login or bot check: Alfredo and OWL apps, Omrei, Zomeit, Rede Global's map and BI, H2E's app listings, Hubzome SmartLeads' project sheet, Unlockit's prices and LinkedIn pages.
- Registry "activity status" (paid on Racius); only the absence of dissolution or insolvency markers in free views.
- Whether portugalconcierge.com (a US service) has any tie to Economat2Biz.
- Who ran casagpt.com.
- Self-declared figures: 40,000 professionals, 2.5 M homes, 15,000 expatriates, 133 countries, OWL's impact percentages.
- Zome and Zomeit shareholders.
- The Cloudflare event counts are untested end to end until the operator switches Web Analytics on.
